

High School Rankings Based on Index Scores

from May 2009 NH-Alt and October 2009 NECAP Statewide Assessments

Content: Mathematics

Sorted by: Name

The data provided in these rankings are based on the same performance index method that is used to produce Adequate Yearly Progress index scores. Schools and districts receive a rank based on their index score. A rank of "1" represents the best performance. When a previous index score is available, a separate ranking is also calculated based on the improvement in the index score from one year to the next year. Schools or districts that have the same index score (or the same improvement in index score) earn the same rank. The schools and districts are sorted three ways: alphabetically, by index score ranking, and by improvement ranking. Rankings are assigned by content area. Writing results were not ranked at grades 5 and 8 because a pilot test was administered and no scores were produced and the grade 11 writing test is never ranked because it is a 1-item test.

High School Rankings Based on Index Scores

from May 2009 NH-Alt and October 2009 NECAP Statewide Assessments

Content: Mathematics

Sorted by: Index Score Ranking

The data provided in these rankings are based on the same performance index method that is used to produce Adequate Yearly Progress index scores. Schools and districts receive a rank based on their index score. A rank of "1" represents the best performance. When a previous index score is available, a separate ranking is also calculated based on the improvement in the index score from one year to the next year. Schools or districts that have the same index score (or the same improvement in index score) earn the same rank. The schools and districts are sorted three ways: alphabetically, by index score ranking, and by improvement ranking. Rankings are assigned by content area. Writing results were not ranked at grades 5 and 8 because a pilot test was administered and no scores were produced and the grade 11 writing test is never ranked because it is a 1-item test.

[†] Number of students who contributed to the index score.

[‡] There is some variation associated with all measurement, including test scores. For example, the results of public opinion polls are reported with a margin of error, such as 54 percent plus or minus (+/-) five percent. On these ranking lists the reported variation is the standard error of the mean (SE). Please note that as the number of students increases, the SE decreases.

* The SE is less than 0.1.

"A" A ranking is not assigned when fewer than eleven (11) student scores are included in the index score for a school or district.

"B" A ranking is not assigned for index score improvement if fewer than eleven (11) student scores were included in either the current or prior year index score.

"NA" Data is not available.

Sorted by: Index Score Improvement Ranking

The data provided in these rankings are based on the same performance index method that is used to produce Adequate Yearly Progress index scores. Schools and districts receive a rank based on their index score. A rank of "1" represents the best performance. When a previous index score is available, a separate ranking is also calculated based on the improvement in the index score from one year to the next year. Schools or districts that have the same index score (or the same improvement in index score) earn the same rank. The schools and districts are sorted three ways: alphabetically, by index score ranking, and by improvement ranking. Rankings are assigned by content area. Writing results were not ranked at grades 5 and 8 because a pilot test was administered and no scores were produced and the grade 11 writing test is never ranked because it is a 1-item test.

[†] Number of students who contributed to the index score.

[‡] There is some variation associated with all measurement, including test scores. For example, the results of public opinion polls are reported with a margin of error, such as 54 percent plus or minus (+/-) five percent. On these ranking lists the reported variation is the standard error of the mean (SE). Please note that as the number of students increases, the SE decreases.

* The SE is less than 0.1.

"A" A ranking is not assigned when fewer than eleven (11) student scores are included in the index score for a school or district.

"B" A ranking is not assigned for index score improvement if fewer than eleven (11) student scores were included in either the current or prior year index score.

"NA" Data is not available.
